ABSTRACT OF THE DISCLOSURE

[0046] Methods, systems, and products are disclosed for providing communications services. One method receives a first data stream at a computer, with the first data stream comprising packets of data packetized according to a packet protocol. The first data stream is recursively segmented into segments, and at least one of the segments is dispersed via a network for a subsequent processing service. A result of the processing service is received, and the result is aggregated into a second data stream. The second data stream is then communicated via the network.
